

Hand Wrapping vs Machine Wrapping

Purchase a pallet wrapper from us and receive **50% OFF** your first skid of machine film.

Are you still manually wrapping loads because you think a stretch wrapping machine is too costly for your current needs? You may want to reconsider before dismissing this option.

Hand Wrapping

- Film waste
- 10% pre-stretch
- 12 loads per hour
- Uneven packaging
- Tedious and time consuming
- Manual labor

Machine Wrapping

- Film savings - up to 66%
- 250% pre-stretch
- 55 loads per hour
- Professional packaging
- Quick and easy
- Minimal operator involvement

Companies that switch to stretch wrapping from hand wrapping see **significant savings in film usage**. Hand wrapping is time-consuming and physically demanding. Stretch wrapping is easier and safer, while reducing product damage and labour. The cost of a stretch wrap machine is easily justified, even with 10-15 loads per day. Stretch wrap machines make business sense; production rates go up, labour costs go down, wrapping is more consistent and there is more quality control over the wrapping process ensuring damage-free distribution.
