# Fishery and hatchery collection

Fishery and hatchery operations require strict sanitation to ensure safe food production, and Vikan provides the cleaning and material handling tools you need to meet those demands.

Our hygienically designed, non-sparking tools are built to withstand extreme cold or hot environments and are resistant to chemicals. With up to 12 color options, they integrate seamlessly into any color-coding plan.

Vikan tools are designed for food contact and feature smooth surfaces and rounded corners, making them easy to clean and reducing the risk of cross-contamination or allergen cross-contact. Our brushes are available with various bristle stiffness levels, from stiff bristles for tough debris and stubborn messes to fine bristles for sweeping dust and small particles. All our tools are durable enough to handle the rigorous demands of fisheries and hatcheries.

No matter the size or complexity of your operation, Vikan's color-coded tools help prevent contamination between designated zones, ensuring safe handling of raw fish and processed products.
