MANUFACTURING TOOL STORAGE

At Rousseau, we are always looking for innovative ways to optimize storage and maximize use of space. As we work in the metal transformation and manufacturing sector, we fully appreciate the challenges of storing the associated tools, such as punches and dies used for punching and bending metal.

Because we already had a section dedicated to NC tool storage, we have simply expanded and renamed it to "Manufacturing Tool Storage." [See pages 268 to 297.](#)

VTZ (VERTICAL TOOL ZONE) CABINET

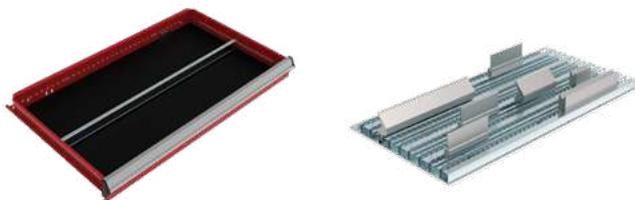

With VTZ (Vertical Tool Zone) Vertical Storage, you can store many different tools used for machining and bending in a relatively small floor area. [See pages 273 and 289.](#)

BENDING TOOLS

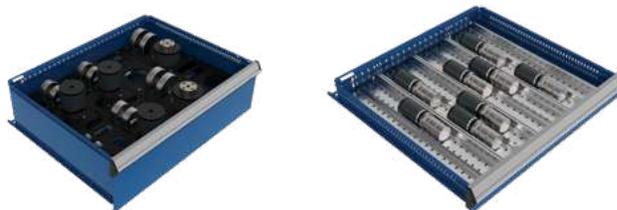

The tools used for bending sheet metal are heavy and come in many different forms. To store them regardless of their shape, size or weight, we offer a RF62 reinforced drawer fitted with a structural partition. [See page 291.](#)

In addition, we have designed adjustable trays for storing tools upright. [See page 285.](#)

PUNCHING TOOLS

Easy-to-use partitions, dividers and groove trays are great options for storing punching tools. As well as these accessories, we have designed storage racks for these tools. [See page 280.](#)

SHELVING WITH SLIDING PANELS

Compatible with open and closed Spider® Shelving, this type of storage is ideal for hanging a wide range of items: tools, straps, cables, pipes, gaskets, etc. [See pages 89 and 103.](#)

The panels are compatible with many 5S accessories, including light-duty and heavy-duty hooks, tool holders and can holders.

POWER FEED PANELS

We have upgraded the USB ports included on our power feed panels. The panels now have one type "A" USB port and one type "C" USB port.

CABINET MOBILE R

Le cabinet mobile R est l'un des plus sécuritaires sur le marché. Son mécanisme de blocage en position fermée s'active d'une seule main. Grâce à un simple mouvement vers le haut, dès l'instant où l'on saisit sa poignée ergonomique, le tiroir s'ouvre avec une étonnante facilité. La configuration du cabinet est, de plus, modifiable sans difficulté: l'ordre des tiroirs peut être changé aisément en tout temps. Nos spécialistes se feront un plaisir de vous aider à bâtir un cabinet adapté à vos besoins et configuré sur mesure pour répondre aux exigences de votre clientèle.

Le cabinet mobile R, de construction industrielle, est également l'un des plus durable présentement sur le marché. Nos spécialistes du département de Recherche et Développement l'ont soumis à des tests de capacité, d'impact et d'usure dont il est ressorti avec grand succès. Muni de roulettes résistantes, il a été conçu pour un usage intensif dans des environnements de travail hostiles.

Un nombre impressionnant d'accessoires viendront compléter votre cabinet. Nous vous offrons une sélection de 6 variétés de dessus, 2 types de poignées de déplacement (à l'avant et sur le côté), des tablettes escamotables ainsi que des cabinets d'appoint pouvant se fixer sur le côté. En outre, vous n'avez plus à vous faire de souci pour le futur puisque ces accessoires peuvent facilement être ajoutés ultérieurement, au fur et à mesure de l'évolution de vos besoins.

Le design unique du tiroir R est une marque de commerce de Rousseau Métal inc.

SHELVING WITH SLOPED SHELVES

Rousseau shelving with sloped shelves provides superior-quality gravity flow storage that integrates perfectly with other products in our Spider® range. This unique product on the market is available in a wide range of dimensions to fulfill your exact requirements.

With an average slope of 15 degrees, sloped shelves are perfect for rear-loading applications (flow rack). These units help to create a "first in, first out" (FIFO) system. Shelving units without rear access are also available for more conventional storage.

Sloped shelves provide optimum visibility for items stored on shelves above the user's eye level. For shelves below this level, the extra angle reduces visibility of the shelf contents. If visibility is more important than flow in your system, we recommend installing lower shelves at right angles (SH20 / 21).

FIFO OPEN SHELVING

HERE ARE SOME OF OUR MOST POPULAR PRECONFIGURED MODELS OF SHELVING UNITS

- The preconfigured models in this section include open uprights and sloped shelves. These preconfigured models include two dividing guides per shelf. The guides can be adjusted in 1½" increments c/c.
- The shelves have perforations for SH52 dividers and SH57 guides in 1½" increments c/c. Extra perforations have also been added on each side for aligning an SH52 divider or an SH57 guide with the side of the post (this part acts as a side edge and prevents interference between stored items and the post fold)
- SH52 dividers are available for 18"D and 24"D shelving only
- A sloped shelf can be replaced with a right-angled BOX shelf, see page 110
- These preconfigured models include single or double corner gussets (depending on configuration)

THE ROUSSEAU DIFFERENCE

Steel beams designed for several decking types: steel, wire mesh and wood.

The distinctive "claw" at the end of each beam hooks onto the front of the posts for extra structural rigidity and incredibly fast assembly.

The common post is compatible with Mini-Racking and industrial shelving.

Using a combination of modular drawers with a shelving unit joined to the Mini-Racking structure, bulky items and small parts can be stored together, see pages 91-92.

NOTE: The unique design of the Spider® post is a trademark of Rousseau Metal Inc.

RECLAIM EXISTING SPACE

Instead of building an addition, use high-density storage and optimize the investment you made in your original space.

Ask our expert consultants for a comprehensive analysis of your potential savings.

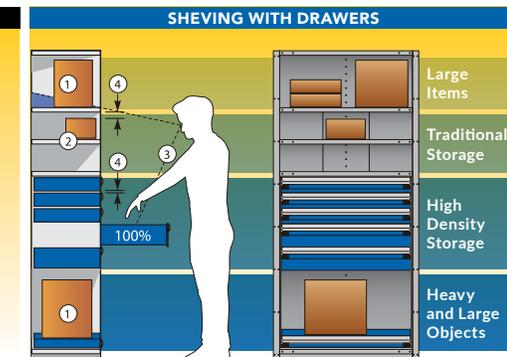

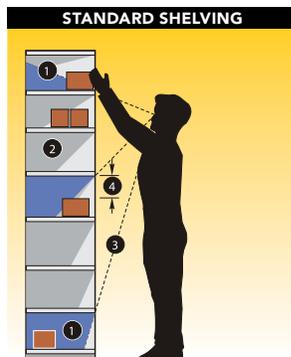

CURRENT SITUATION

- 1 Top and bottom shelves are not properly filled, nor accessible.
- 2 Back of shelves are poorly lit and visible.
- 3 Visibility of various items is hampered by the shelves.
- 4 Vast amount of unused space between shelves.

RESULT

Arduous management and location of your inventory.

OUR RECOMMENDATIONS

- 1 Widely spaced shelves for the storage of larger items.
- 2 Close-set shelves positioned at eye-level.
- 3 Easily locate objects in a drawer that opens at 100%.
- 4 Optimized use of space based on the sizes of its stored items.

RESULT

Easier management of your inventory based on an organized storage method.

5S AND WALL-MOUNTED STORAGE

Many Rousseau products are available in a wall-mounted version to help you organize and maximize your available space while keeping floors clear. Wall-mounting makes cleaning easier and everything you need is still within easy reach.

Over the years, Rousseau has also developed many different storage solutions to meet the standards of the 5S methodology. The aim of this Japanese technique is to continuously improve the work environment. Its name comes from the same first letter used to illustrate its five fundamental principles: Sort, Set in Order, Shine, Standardize and Sustain. It is designed to optimize organization and efficiency of the work environment by ensuring each tool is in the right place, easy to find and well identified.

A choice of 20 standard colors is also available to color code your 5S management.

CDSA, City of Quebec

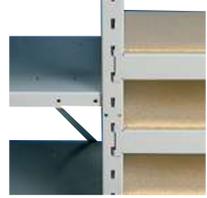

The unique and highly functional common post is the cornerstone of the structure. Its unique tubular T shape provides up to seven fixing zones for different applications. It also has a hollow center to prevent interference between sections.

Record storage units can be combined with the industrial Spider® Shelving System.

All vertical space can be put to use by combining the Spider® record storage system with two-level shelving.

Shelves are installed on the posts with compression clips. The beams hook onto the front of the post and can support steel, wood and wire mesh decking.

MANUFACTURING TOOL STORAGE SYSTEM

Manufacturing and processing steel (via machining, punching and bending) has been part of our business since 1950. Because of our vast experience in this sector, we fully understand the challenges associated with managing and storing the tools used.

These tools are a significant investment, so we have created a wide variety of storage solutions specially designed to provide maximum protection while optimizing and increasing the density of the storage.

We have leveraged our tool storage expertise to develop storage lines for punching and bending tools.

Whether you work with all these tools or specialize in just one of these areas, we are sure you will find a Rousseau storage solution that meets your needs.

MACHINING TOOLS

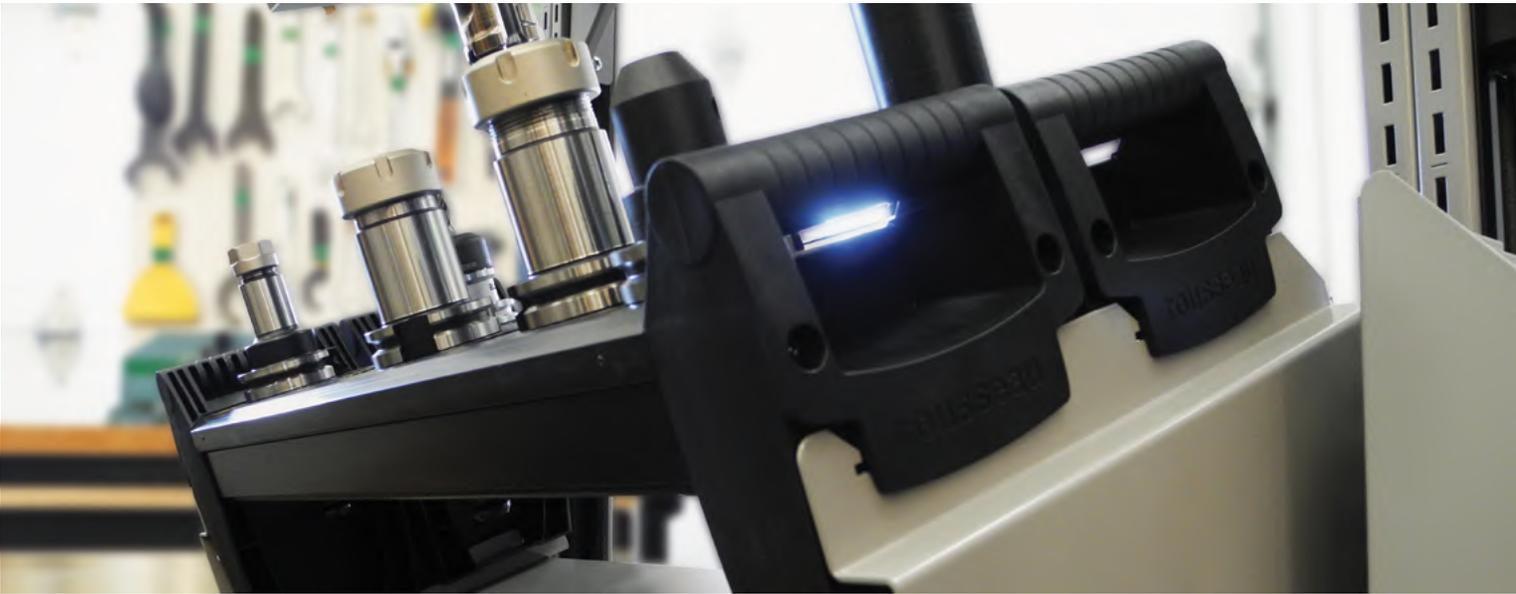

PUNCHING TOOLS

BENDING TOOLS

MACHINING TOOL STORAGE

With the flexibility of our Machining Tool Storage line, your tools are always protected during regular handling, transportation and storage. Rousseau's CNC tool rack is unique in many ways, it is:

- **Modular:** It is compatible with the entire Rousseau product range
- **Adaptable:** Available blank or with perforations, it can be adapted to any type of tool
- **Sturdy:** Maximum support and stability prevents tools from falling, even when the rack is tilted

- **Ergonomic:** Practical, ergonomic handles make it easy to carry. The 20° angled adapters facilitate handling of parts in Spider® Shelving and on WM uprights
- **Secure:** With its resistant PVC extruded design, it can withstand blows and corrosion, and allows fluids to drain away, which prolongs the life of your tools

The racks also feature a tool identification zone for quick and easy tool retrieval.

IMPORTANT

CNC tool storage products include blank tool racks by default. To order models with perforated racks, contact Customer Service or consult the Price Tool on e-Rousseau

PVC deck sections for Mini-Racking must be ordered separately from preconfigured models. The following table specifies the product number corresponding to your tool type.

Made of resistant PVC, the extruded part of the deck section protects tools against impacts, corrosion and metal shards.

The number of tools a PVC deck can hold varies according to tool diameter and the extruded surface length. The number of holes specified in the table indicates the number of perforations per extruded surface.

- Deck section with blank (NC30) or perforated (NC31) surfaces available
- 6"W sections
- Load capacity for an 18"D PVC deck Section: 75lb.
- Load capacity for a 24"D PVC deck Section: 100lb.
- PVC deck sections can be combined with SR40 steel decking on the same level
- 6"W deck Section do not include label holders

PUNCHING TOOL STORAGE SOLUTIONS

PUNCHING TOOL STORAGE

Rousseau's storage system for punching tools has been specially designed to provide efficient and organized storage for type A, B, C, D and E (thick turret) tools.

Whether you need to store your tools close to your machines, transport them for maintaining them (sharpening and lubrication),

inspect them before using them, or perform quality control on manufactured parts, we have a solution for you.

To optimize and increase the density of your tool storage, we recommend three solutions depending on the type of punch and die you use.

STORAGE TYPE	TOOL POSITION	TOOLS ASSEMBLED	
Storage trays	Tools lie flat	Assembled or non-assembled	
Partitions and dividers	Tools upright	Non-assembled	
Punching tool racks	Dies lie flat or upright and punches are upright ¹	Non-assembled but grouped together	

NOTE: ¹ See page 284, for more details.

The drawer interior layouts included in the preconfigured cabinet models are labeled 1 to 8 and can be found on [pages 283-284](#).

PUNCHING TOOL RACKS

These tools racks are made of galvanized steel and protected with a 1/4" thick durable PVC plate. Punches are supported by their shoulders and do not rest directly on the drawer bottom. The racks spread the load and prevent buckling of the drawer bottom.

- Trays A and B store 3 dies (lying flat) for every punch
- Trays C, D and E store 2 dies (upright) for every punch
- Versions C, D and E include a second level to stabilize the position of the tools
- Recommended for maximum 36"W housings
- Designed to be installed in a 10"H or 11"H (9" usable height) drawer, 27" deep.
- Width: 8"

BENDING TOOL STORAGE SYSTEM

Rousseau's bending tool storage system has been designed to provide maximum protection for your punches and dies while offering optimal and ergonomic storage.

Our storage solutions have been engineered for the tools you use, and they take into account the management methods available for storing and transporting them within your company. Our range of solutions are compatible with multiple tool styles: American, European, Wilson WT, Wila NS, Trumpf and more.

Whether you use a system where the tools are stored in a central store then allocated based on the daily production schedule, or each press brake has a toolbox containing the punches and dies needed for specific tasks, we are sure you will find a Rousseau storage solution that meets your needs.

STATIONARY CABINETS

The tools used for bending sheet metal are heavy and come in many different shapes. To store them regardless of their shape, size or weight, we offer a reinforced RF62 tool drawer fitted with a RG07

structural partition. Extra structural partitions can be added as needed to increase the number of subdivisions inside the drawer. [See page 291.](#)

CHANGE CART

Change carts are used for a specific purpose. They are the link between the central store and tool cabinets, which are located next to press brakes, so the cabinets can be filled and emptied on a daily basis.

They have a wider wheelbase at the front of the cart to ensure perfect stability. The cart top has an adjustable tool tray and laminated hardwood top for easy tool preparation.

- Preconfigured cart models have 6" casters, including two rigid and two swivel casters with total-lock brakes, as well as an integrated lock-in mechanism (A)
- All cabinets are fitted with a True One-Drawer-at-a-Time System
- 4 RF62 drawers (4"H) with RG07 partition
- 1 roll-out shelf (6"H)
- All cabinets include a standard cabinet lock
- To add an L50 electronic lock, [see page 45](#)
- Two versions of adjustable tool tray:
 - o 02 (1.0" / 10): recommended for American-type tools. Hollow depth: 1.030"
 - o 01 (1.5" / 15): recommended for European, Wilson WT, Wila NS, Trumpf type tools. Hollow depth: 1.468"

KEY TYPES - L3

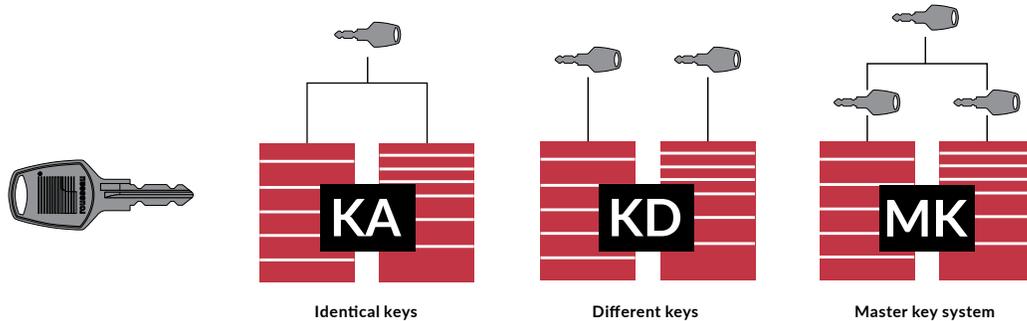

FEATURES AND BENEFITS

To ensure your work tools remain safe and secure, it's important to be able to lock your storage solutions when required. We have several key management options for different scenarios. For example, for ease of use, you may want the same key to open any unit; or perhaps, for extra security, you require different

keys for each unit; or maybe you want different access levels based on seniority. For our L3 lock and key system we have three management types: identical keys (KA), different keys (KD) and a master key system (MK).

FOR ALL PRODUCTS AND COMPONENTS WITH LOCKS, SPECIFY THE TYPE OF KEY REQUIRED: KA, KD OR MK.

YOU MUST SPECIFY THE TYPE OF KEY REQUIRED FOR THE PRODUCTS BELOW

ROUSSEAU'S COMMITMENT TO THE ENVIRONMENT

Rousseau is constantly seeking to minimize its environmental footprint. We have taken various measures over the years to meet this goal, such as using paint that produces no volatile organic compounds (VOCs), and recycling cardboard and scrap metal. These initiatives help users of Rousseau products to qualify for LEED® certification. By choosing Rousseau, you are choosing a responsible and environmentally conscious manufacturer.

HERE'S WHY

USING POWDER PAINT

For several years now, Rousseau has been using powder paint instead of liquid paint for all products manufactured. This significantly reduces emissions of CO2 and eliminates several tons of hazardous materials. It is now the only type of paint used in the plant.

RECYCLING CARDBOARD AND SCRAP METAL

To do our part for the environment, Rousseau recycles all scrap steel and aluminum. It is sent to a processing facility and melted down for use elsewhere. Boxes and pallets are also sent out to be used for heating, among other uses.

Plastics are sent to a collection center.

OPTIMIZING VENTILATION SYSTEMS

Our ventilation systems have gradually been updated with automated controllers that reduce the amount of fresh air and heating needed.

REDUCING WATER CONSUMPTION

The plant has also reduced its water consumption by 90% thanks to an ingenious water cooling system.

USING PAPER SOURCED FROM RESPONSIBLY MANAGED FORESTS

As part of our commitment to sustainable development, we prioritize the use of paper from responsibly managed forests and other controlled sources.

Rousseau is confirming its status as an industry leader by implementing these environmentally conscious initiatives

ROUSSEAU AND LEED®

LEED® (Leadership in Energy and Environmental Design) is an international green standard of certification created in 1998 by the USGBC (U.S. Green Building Council). Projects can obtain LEED® certification through a points-based system, which means the certified building or project excels in environmental compliance.

Rousseau can help customers obtain this certification because its environmentally-friendly processes can contribute toward earning LEED® points.
